CRANDON PARK

Park Precedents

INSPIRING A VISION FOR CRANDON PARK'S FUTURE

 $\bigvee OL. 7$

The Crandon Park: A Call for Change report is comprised of an Executive Summary and the following Research Volumes:

- Vol. 1 Introduction
- Vol. 2 Crandon Park Today | Part 1 Site Analysis
- Crandon Park Today | Part 2 Specific Area Analysis
- Vol. 3 Relevant History
- Vol. 4 Master Plan Evolution
- Vol. 5 Park Governance & Funding
- Vol. 6 Recent Best Practices
- Vol. 7 Park Precedents
- Vol. 8 Historic Documentation

DRAFT - ISSUED ON JULY 7, 2020

Park Precedents

Inspiring a Vision for Crandon Park's Future

Central Park | NY

Large, small, by the ocean, or in the mountains there is a diverse array of "great" parks throughout the world. Despite all the different forms a park can take, there are certain characteristics that the world's most successful parks share, which increase their access and enjoyment by the public throughout seasons, and over generations.

This Research Volume provides an overview of the basic characteristics of a great park. It also provides a general snapshot of the public parks within a thirty-minute drive from Crandon Park, with particular emphasis on Bill Baggs Cape Florida State Park. Together, these studies provide a baseline understanding of the local area's context and recreational offerings, while always linking back to the potential of Crandon Park.

Great Parks of the World

Crandon Park has the potential to become such a cherished and celebrated place as these Great Parks serving as an emblem of pride for all Miami-Dade County. The design of any large site can deliver amenities and solve planning problems, only exemplar parks have the power to inspire, and transport visitors away from the hum-drum of their dayto-day worries. Increasingly in the 21st century, large parks will play a critical role in the health of individuals and our collective communities and in doing so improve the social lives of cities. Iconic parks provide the antidote to the digital, saturated 21st century, providing clarity, peace of mind, and a reconnection to a community's rich assets – natural, scenic, ecological, historic and cultural. In past centuries, many American Cities took the audacious step to provide the platforms for the greatest experiences of the City – we know them today as Central Park, Bryant Park, Governors Island, Crissy Fields, amongst others.

These iconic spaces are the investments that make cities not only livable, but exuberant, joyful, and places worth staying for a lifetime. These places could only be in their hometowns, and yet there is nothing regional or modest about their designs. These places are timeless, inventive, transformative, startling in their clear narratives and layers of invitation to all users.

What Makes a Great Park?

For a city or entity to invest in the optimism, multi-generational timelines, and the democratic nature of a park, is to broadcast that the community cares about the past, present, future, and each other. For the world's greatest cities, large, iconic parks are a turning point and a signature of forward-thinking urbanity and civic values. Recent decades have shown a flourishing of international park making; monumental undertakings such as Governors Island have the ability to dramatically and tangibly improve quality of life in the City, provide return on investments, and bring 21st-century new destinations and energy into the heart of communities.

Crandon Park's current state presents a once-in-a-lifetime opportunity for the County and our entire team: a chance to create a wondrous, international park for generations, the chance to interpret the legacy of William Lyman Phillips's vision for 21stcentury minds, and the challenge of designing a park that is inventive, transformative and forward-thinking. But how do we get there?

The following are some of our thoughts around the major themes, challenges and opportunities associated with Crandon Park, and examples of how other exemplary parks have tackled and embraced these ideals.

Unified, Authentic Identity

Anchored Entry & Defined Edges

Connect With the Community

Opportunities for Ownership and Stewardship

View Corridors & Sight Lines

Practice Resilience

Clear, Connected & Safe Access for All

Ensure Economic Sustainability

Access to Nature

Unified, Authentic Identity

The identity of a place is both a physical and sensual element. It can be embodied by a cohesive site aesthetic, a unique program or function, or an iconic design feature.

A unique park identity is created through deliberate references to local context, history, urban setting, and surrounding ecology. This quality can only be achieved by incorporating research, leveraging opportunities and factoring the social and political environment into the creative process. Taken together, these considerations can yield a functional and even spiritual environment.

Our team is by the captivating climate and environment of Key Biscayne. How alluring to have mangroves, manatees, clear blue skies, and a coastal golf course, just off the shores of the City. Key Biscayne is the place where the bay meets the ocean, and coastal elements mix with views of a city skyline — and in that, we see an atmosphere like none other.

Crandon Park as a whole has no cohesive identity. Its existing upland facilities are isolated and there is little experiential connection between different program areas. Crandon Boulevard, the thoroughfare through the park, divides the site,; leaving only a painted crosswalk left to unite the western and eastern sides of the site.

Maxima Park, The Netherlands

We envision Crandon Park as being one place from end-to-end; from the bay to the Atlantic — immediately recognizable as an experientially rich, united whole.

Governors Island, NY | West 8

Resilient & Sustainable

The distribution and accommodation of the program on a site should be deeply influenced by, if not driven by, a reverence for and commitment to every acre of the site, with an overarching eye to achieve truly sustainable practices.

Crandon Park is on the front line of defense against storm surges and sea-level rise. Many challenges also need to be faced on the upland storm water and waterside engineering aspects of the project. As a low lying coastal park, it is critical that Crandon Park integrate infrastructure improvement within its planning to address issues of climate change, increased intensity and frequency of storms.

Soundscape Park, Miami Beach | West 8

Anchored Entries & Permeable Edges

The renowned urbanist Jane Jacobs taught us that Great Parks have Great Edges. Park edges can stitch together the surrounding neighborhoods and large programmatic areas of a site.

For Crandon Park, this means providing proper entities into the park from the Rickenbacker Causeway and the Village of Key Biscayne. It also means providing permeable edges and defined entries between amenity and nature preserve areas. Clear entries and edges create a legible identity on all sides—just as Olmsted and Vaux's Central Park defines its own threshold by exhibiting a strong, yet permeable edge against the city.

Opportunities for Ownership & Stewardship

People and communities care for and protect that which they know and love. This is no different for a beloved park — it generates a following, and becomes a familiar gathering space. In order to elicit this type of care for a park within a community, the park must provide for the local needs and be accessible. Parks throughout the world have found successful strategies for achieving these goals by engaging public-private partnerships, non-profit groups, and providing other avenues for communities to engage directly with the park by volunteering, donating, fundraising, or simply providing more educational events within the park to nourish local interest in a site's unique natural and cultural offerings.

Crandon Park currently has the Marjory Stoneman Douglas Nature Center, a non-profit organization, which has great success in engaging children and park visitors. Unfortunately, the capacity of the Nature Center to grow is stunted by the current Master Plan document's restrictions. These same restrictions prevent the Park from engaging with and benefiting from the local community. Identifying opportunities for philanthropy and strengthening the Park's current governance model are also of equal importance in ensuring its continued fiscal health and maintenance. This inability to nurture community stewardship of the land is stifling Crandon Park's future.

View Corridors & Sight Lines

Orchestrating view corridors and sight lines of a Park is to curate the visitor's experience. Views join the park to its surroundings and skyline, while sight lines within the park connect interior programs — for example, linking natural areas to active recreation areas. Opening these views not only allow visitors to better understand and engage with the site, it creates a greater feeling of comfort and safety.

Despite Phillips's original design intent, Crandon Park's visual access is poor, creating a sense of isolation between amenities. Currently, one can drive past the park, without even realizing its presence. Most obvious is to develop more substantial connective tissue-bridges, streetscapes, and gateways – enabling easy access from all sides. Equally important is to amplify the Park's visual connection to the City, signaling and inviting users from all directions, while providing unmatched views to park visitors of Miami's skyline.

Governors Island, NY | West 8

Máximapark, NL | West 8

Access to Nature

Providing an array of options for human engagement with nature enhances the value and enjoyment of a park. A community's access to nature is also beneficial in helping its citizens achieve a healthy lifestyle, both mentally and physically. If optimized, pedestrians, joggers, cyclists, kayakers, boaters can pass through Crandon Park or make it their destination. The element of nature is a rare commodity in Miami — it must be optimized, protected, and shared. Crandon Park hosts a unique array of flora and fauna — sharing these with visitors and educating them of their value allows these spaces to be celebrated and protected simultaneously.

Governors Island, NY | West 8

Máximapark, NL | West 8

Crandon Park today provides plenty of vehicular connections and access; however, it is failing to provide safe routes for pedestrians and cyclists.

RIO Madrid, Spain | West 8

Clear, Connected & Safe Access for All

Clear gateways and intuitive connections between park and ecological networks is essential for park enjoyment. Ensuring these connections are accessible to a variety of different user ages, abilities, and mobilities is equally important. This kinetic energy goes a long way to activating public space.

Crandon Park today is overrun with vehicular connections and access. However, it fails to provide safe routes for pedestrians and cyclists. Indeed, its seas of asphalt and concrete create an especially hostile environment for pedestrians. By employing sustainable practices and resilient materials (eg. permeable pavement), Crandon Park can become a model for innovative access.

Economic Sustainability

Our cities and communities expect a lot from parks today. Luckily, cities are no longer expected to shoulder the financial viability of these expectations alone. Sources of capital and operating funding available, and utilized by great parks, include contributions, donations, increase of revenue-building programs and facilities, and other smaller methods of value capture via sales and rent from vendors. Aspirations are high, and must be balanced by a phased and implementable strategy that ensures long term sustainability and revenue generation.

Indeed, to realize the benefits, the Crandon park will require a funding strategy to consider and leverage the capital and operational resources required to ensure that this important asset is sustainable for generations to come. Crandon Park's Master Plan Amendment needs to demonstrate a vision that integrates, acknowledges and enhances the site's economic performance while remaining sensitive to the needs and desires of the surrounding communities.

Governors Island, NY | West 8

Activation & Connection to the Community

Crandon Park should not depend on one dominant program. Our favorite public realms are united by one identity, but are heterogeneous and are able to adapt over time. First and foremost, people must want to be here. There must be exciting activities to do, attractive things to see, diverse people to meet. And, there must be reasons to return, time and time again. This type of thriving place requires cross-pollination and discovery.

Miami's changing age profile is important when considering equitable facilities and services, especially as growing numbers of children, young families and aging Baby Boomers change demands for specific facilities and services. Great arks are not made overnight. They are enlivened by use, evolve with the growing city, grow more mature and beloved with time, and accumulate richness and power with every generation and memory. We must think of parks as living, evolving works, and their design should allow for flexibility, adaptation and evolution.

Crandon Park's sleepy atmosphere and remoteness is both an asset and a challenge for the planning and design of the Park. In order to create Miami-Dade County's 21st century park, we believe that this beautiful, bucolic place needs to be awakened and opened up to a new generation of visitors, without eliminating the unique atmospheric qualities that make it so magical today.

The next generation of Miami-Dade will fall back in love with Crandon Park, and we believe it can become the symbol of 21st century Miami, and moreover, of what the 21st century coastal park can be.

Florida Parks

A Modern Legacy of Protecting & Providing Open Space

Coral Gables

1. Florida DEP, "History & Culture of Florida State Parks," Florida State Parks, (https://www.floridastateparks. org/learn/history-culture-florida-stateparks)

2. Peteryberk, Elizabeth. "Introduction," in Building Eden: The Beginning of Miami-Dade County's Visionary Park System, edited by Rocco Ceo (Pineapple Press, Sarasota, Florida: 2018), p. 10. Florida's diverse collection of parks and nature preserves provide a foundation and legacy for contemporary parks today to expand upon. Crandon Park's history contributes significantly to Florida's park narrative, having been commissioned and designed by two of Florida's most recognized public park pioneers: Charles Crandon and William L. Phillips.

Miami-Dade County Parks, Recreation and Open Spaces is the third largest county park system in the United States, with 270 parks covering 13,000 acres.

The admiration the park's systems founders had for the landscape is today reflected in a greater understanding of the complex networks of the ecosystem and its benefits to health and wellbeing. As we apply new knowledge to new conditions, it behooves us to remember the civic mindedness of predecessors who could not predict the impact of their dedication to the parks, but whose faith in conservation and construction for the public good already has benefited Miami-Dade County for many decades. It is now our generation's responsibility to imagine what new benefits may be bequeathed to our successors.²

Tree Canopy Coverage: 80% (estimate)

General Description

In the Jim Crow era, Virginia Key served as the recreational counterpart to Crandon Park for African Americans. Post-assimilation, it fell into disrepair and was closed until receiving historical designation 2008. The beach is now open and well-used during the weekend and also hosts events such as concerts and festivals. It is known for its excellent bike trails.

Park Comparison

Crandon Park vs. Bill Baggs State Park

Bill Baggs Cape Florida State Park is located just 1.5 miles south of Crandon Park, at the terminus of Crandon Boulevard. However, Bills Baggs enjoys a much higher visitorship rate than Crandon Park. This is not the only large difference between the two parks. Bill Baggs's active recreation and programming, level and diversity of funding and revenue, and level of general maintenance is also higher than that of Crandon Park. These factors of management, funding, maintenance, and amenities are interrelated in the collective success of a park.

The following section breaks down the general statistics of each park and the amenities they offer. This comparison draws the main conclusion that Crandon Park's surrounding community does enjoy spending time at parks, are willing to pay for the amenity, and desire to engage and contribute to the space and it's natural and cultural offerings. Bill Baggs has successfully tapped into the needs and desires of the community, as is evident by its attendance and enjoyment. Learning from these local lessons, Crandon Park can share in this success, supporting the community with its own unique offerings.

Crandon Park

Key Biscayne, FL

Aerial view of Crandon Park

Acreage: 975 acres

Overall Dimensions: 2 mi x 1 mi

Connectivity: Rickenbacker Causeway/Crandon Boulevard

Hardscape/Softscape Ratio: 10/90 (estimate)

Tree Canopy Coverage: 70% (estimate)

Park Assessment

While a valuable ecological and recreational asset, Crandon Park currently lacks a cohesive identity, clear wayfinding, and intuitive circulation for both vehicles and pedestrians. Much of the hardscaping has fallen into disrepair. Flooding, sea level rise, and resilience in the face of hurricanes are also significant concerns.

Park Assessment

In 2013, Bill Baggs Cape Florida State Park was ranked as having the 7th best beach in the United States by Forbes.³ The park's amenities are in-use and maintained. Most roads and asphalt pathways are in decent condition. Amenities

Mobility & Access

Crandon Park

Assessment

The Rickenbacker Causeway and Crandon Boulevard are currently car-centric thoroughfares. What non-vehicular circulation exists along this route, specifically the bike lane, is not separated from the vehicular realm. This condition poses a risk for pedestrians and cyclists.

In terms of connectivity, the east and west sides of Crandon Boulevard are visually and physically disconnected from each other. Coupled with the multiple turnarounds, entries, and exits, which lack clear logic and unity, the boulevard is often dangerous and confusing for vehicular traffic. In the park's present condition, most of the preservation areas do not have pathways through them. This limits the ability for visitors to engage with the Park's unique natural offerings.

Finally, the parking throughout Crandon Boulevard is condensed into large swaths of asphalt servicing their specific amenity. These parking lots are rarely at capacity - in fact, they were observed practically empty during the study team's site visits.

1 1250 ft

Assessment

Although somewhat limited, the vehicular circulation has more East-West connectivity than Crandon Park. The parking lots and turnarounds are also more clear, coherent, and safe.

Pedestrian and bicycle pathways through the site are much more extensive than Crandon Park, and provide access to almost all ecologically significant areas.

Program & Amenities

Assessment

Many areas of the Park, such as Crandon Gardens, do not experience consistent use. Other areas, such as the Tennis Stadium are no longer functioning. Other areas, such as the beach picnic area and the Tequesta trail system, have an inadequate level of service.

Areas such as the Marjory Stoneman Douglas Biscayne Nature Center, Crandon Gardens, and the preservation areas have the potential to be activated in such a way that strengthens the community's bond with the park's ecological character. Education, stewardship, and recreation in these areas can all play a role in developing this relationship.

While building revenue is not the primary purpose of the park, incorporating a reasonable level of revenue-building activities within the program can contribute to Crandon Park's long term economic sustainability. Increased revenue can be achieved through introducing new programs such as concession stands and dining options, or by enhancing current revenue-building amenities, such as the Golf Course.

Assessment

While still maintaining a protected nature preserve, Bill Baggs optimizes all of its cultural and natural assets for public enjoyment and stewardship. Cape Florida Lighthouse has historical designation, visitors are educated and engaged through interpretive material and programs. Almost all built structures are maintained and in use. Rather than operating from only sunrise to sunset, there is also the option for visitors to camp overnight. This provides the opportunity to understand the park's ecological offerings on a deeper level. Park employees are available 24 hours a day, 7 days per week.

Ecology & Wildlife

Assessment

There is currently a lack of awareness surrounding rare and valuable plant communities and habitats within Crandon Park. This is partially due to a lack of interpretive signage and access into the nature areas.

Although some of the invasive species were wiped out by hurricane Andrew, much

of the site now suffers from overgrowth of vegetation, particularly along trails within the Bear Cut Nature Preserve. Other preservation areas lack trails entirely, which prevents park visitors and community members from fully engaging with the island's unique habitats. Australian pines, an invasive tree species, continue to exist. Invasive fauna such as iguanas and peacocks are common throughout the site.

Thanks to the protected bicycle and pedestrian trails within the site, both locals and visitors have the ability to experience the full spectrum of ecological value that exists within the Park. Even the waterways are accessible and enjoyed by locals with small boats and kayaks.

Bill Baggs is especially known for birdwatching, which can be best experienced from Robin's Birding Trail. Historically, migratory birds have stopped at a clearing along the trail as a resting point along the Eastern flyway linking North and South America.

Risk & Resilience

Crandon Park

Assessment

Crandon Park is susceptible to severe erosion, which diminishes the shoreline of the site and alters sensitive ecologies. The beach dunes have also become degraded and disconnected over the decades, and are in desperate need for enhancement and protection. They could be further celebrated with interpretive signage

As a barrier island, all of Key Biscayne is vulnerable to hurricane events. In 1992, Hurricane Andrew decimated the island, causing severe flooding and tree downfall. While it did wipe away a large number of plant species, the majority of these had been harmfully invasive. Katrina also took the island by storm in 2005. Most recently, Hurricane Irma hit the park in 2017. Due to climate change, severe storms in Miami-Dade County are expected to become increasingly more frequent and extreme. Threats of rising sea levels also put Crandon Park at risk of increasingly frequent flooding.

Beach contamination has also posed significant disturbances in Crandon Park. This is most often caused by hazardous enterococcus bacteria colonies. Algae blooms and rotting seaweed on the beaches also contribute to the contamination.

Assessment

The installation and maintenance of a seawall indicates that the state has committed to investing in hard infrastructure to prevent erosion, increased resilience against flooding, and a barrier for storm surge. While this may not be all-encompassingly adequate for the increased environmental disaster and risk the future decades hold, it is a functional line of defense.

In terms of hurricanes and water contamination, Bill Baggs essentially shares the same issues as Crandon Park.
